

# RAVENbulletin

## Raven Releases Cruiser Version 1.5 Software

Sioux Falls, SD - Raven confirms their dedication to add value to your customer's investment through the expansion of Cruiser capabilities. Cruiser version 1.5 software is a FREE upgrade, which improves the usability of Cruiser and adds several additional features. To upgrade your Cruiser, simply download the zip file at [www.ravenprecision.com/Support/Software/](http://www.ravenprecision.com/Support/Software/), and follow the instructions on the website.

### Important note regarding the Cruiser version 1.5 update process:

DO NOT remove power or the USB drive from the Cruiser at any time during the update process. Removing power or the USB drive during the update may result in corrupted program files, and would require assistance from Raven service to resolve. Since the USB drive may bounce around while the vehicle is in motion, it is recommended to remain stationary while the update is in progress. This will help ensure that the update process is not interrupted.

### Cruiser version 1.5 new features:

- Now compatible with SmartTrax/SmartSteer in Last Pass, Fixed Contour, and Pivot patterns
- On-screen control and programming for SmartSteer
- Set B off of heading function
- Capable of interfacing to RGL600/600ic light bar
- SmartBoom and SmartRow on-screen programming, control, and display\*  
\*Requires SmartBoom/SmartRow controller software version 1.01.0038, due to release 3/27/09
- Improved speed display
- Revised touch screen calibration process
- Simplified boundary functions now included on the guidance screen
- Improved light bar, display and tilt configuration screen layouts
- Enhanced GPS output and baud rate settings screen

*Note: e-Dif enabled Cruiser units with software version 1.0.0 or 1.1.6 MUST be updated to version 1.2.1 software prior to installing 1.5.0.5 software.*

### Questions?
